

# Terang, Sirasun, Batur Field Development

**Client:** PT Timas/Kangean Energy Indonesia

**Year:** 2010

**Location:** Indonesia

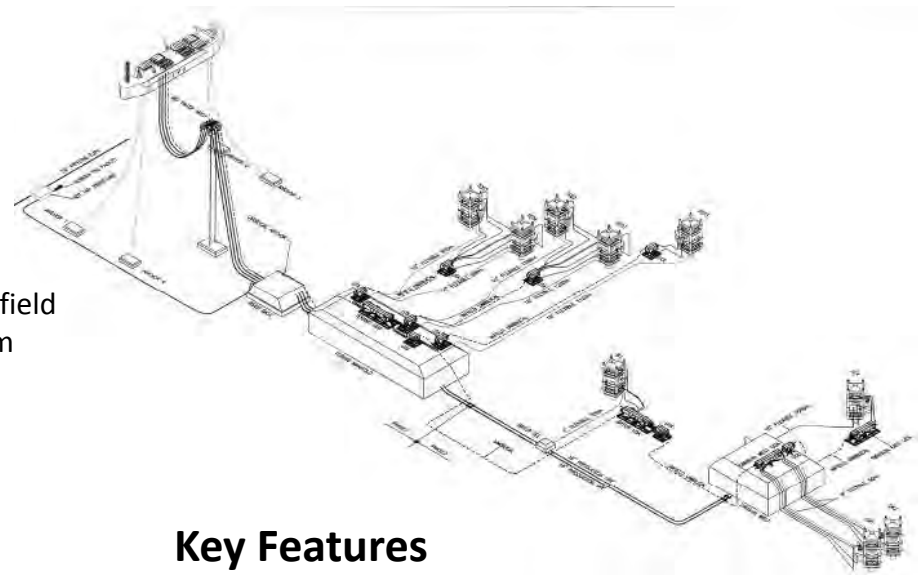

## Description

First phase is a 5-well subsea gas field development, offshore Indonesia. Produced gas is processed on an infield FPU then exported to the East Java Gas Pipeline in 100m water depth.

## Antares Scope

Verify the FEED work and perform detail design for the subsea system including:

- Flow Assurance
- Infield Flowline design
- Export pipeline and hot-tap design
- Control system and umbilical design
- Manifold and riser base structural and piping design

## Key Features

- ✓ Work is being performed by PT Antaresindo
- ✓ Design team based in Jakarta
